2023 Water Allocation and Supply

Due to recent rains and snow pack, the Bureau of Reclamation increased the District's Municipal & Industrial (M&I) water allocation from 75% to 100% for the 2023-24 Water Year, which started March 1, 2023 and will end February 29, 2024.

2023 New Capacity Charges

Adoption of Resolution No. 2023-02 amending the Plant Capacity Charge:

To support Capital Improvement Plans as included within the 2015 Water Master Plan it is necessary to update the Capacity Charge for new services to adjust for inflation. Based on the scheduled improvements to the distribution system necessary to support additional capacity to serve the District's needs, it was recommended that the Board adopt Ordinance 2023-02 Amending the Plant Capacity Charge. The new Capacity charges effective 4-1-23 are as follows:

³/₄" Service1" Service1.5" Service

\$19,632.00 \$32,690.00 \$65,380.00

State Water Resource Control Board Lead and Copper Rule Improvements for Drinking Water

The United States Environmental Protection Agency (U.S. EPA) issued revisions to the federal Lead and Copper Rule (LCR) on January 15, 2021. U.S. EPA's new Lead and Copper Rule Revisions (LCRR) strengthen every aspect to better protect communities and children in elementary schools and childcare facilities from the impacts of lead exposure. The new LCRR's objective is to remove the lead from of our nation's drinking water and empower communities through information.

The LCRR requires community water systems to conduct an inventory of service line materials. This information is to be submitted to the State Water Resources Control Board in October 2024.

In order to comply with the new LCRR, the Centerville Community Services District field operators will be conducting this inventory by uncovering the customer's side of the meter to inventory all copper, galvanized and PVC lines. It is our goal to collect this information in the least invasive manner possible. If you have any questions, please contact the District Office.

Do You Have Defensible Space?

ARE YOU PREPARED FOR FIRE SEASON?

Creating defensible space is essential to improve your home's chance of surviving a wildfire. It's the buffer you create between a building on your property and the grass, trees, shrubs or any wildland area that surround it. This space is needed to slow or stop the spread of wildfire and it protects your home from catching fire – either from direct flame contact or radiant heat. Defensible space is also important for the protection of the firefighters defending your home.

Two Zones Make Up the Required 100 feet of Defensible Space:

ZONE 1: 30 feet of Lean, Clean & Green

Remove all dead plants, grass and weeds.

Remove dead or dry leaves and pine needles from your yard, roof and rain gutters.

Keep tree branches 10 feet away from your chimney and other trees.

ZONE 2: 30–100 feet of Reduced Fuel

Cut or mow annual grass down to a maximum height of 4 inches.

Create horizontal spacing between shrubs and trees.

Create vertical spacing between grass, shrubs and trees. <u>Use Equipment</u> <u>Properly to Keep from Sparking a Wildfire</u>

Mow before 10 a.m., and never on a hot or windy day.

Next Board Meeting:

The next scheduled Board of Director's Meeting will be held Wednesday, April 19th at 7:00 pm., at the District Office.

The public is always encouraged to attend.

<u>Average Water Usage</u> <u>for the month</u>:

Compare the usage on your water bill with the average of the District. March's Average: 1,300 cubic - feet.
