## Muletown Wire Replacement Project

The Muletown Pump Station contains critical controls and instrumentation for both the pump station as well as the Muletown Conduit Turn-Out. More recently, operations had experienced repeated control failures at the turn-out which provided both erroneous information to the SCADA system and resulted in the need to manually operate the valves at the turn-out. In testing the control wires PACE Engineering conducted continuity tests and confirmed that all wires experienced shorted resistance somewhere between the two sites.

To better mitigate repeating this issue in the future, competitive bids were solicited to replace the failed, spliced wires with a single line pull (approximately 1,100-ft to include 8-#12 THHN conductors) through four junction boxes continuously without any splices between the pump station and the turn-out.

The Board unanimously voted to award the bid to Bullert Industrial Electric.
